

6.0 Quake in Guatemala

There are reports that a 6.0 magnitude earthquake struck in Guatemala earlier Monday morning.

There have been no immediate reports of injuries or damage.

The US Geological Survey is reporting that sections of Argentina also experienced strong earthquakes in the last 35 hours.

It says the quake that shook the southeastern coast of Argentina at 8.00am yesterday morning registered at 6.3, but there were no reports of injuries or damage.

Last Friday, an earthquake measuring 5.6 shook Venezuela.

The Venezuelan quake took place three days after the devastating quake in Haiti.
