
New Breast Cancer Treatment Clinics Await Approval To Operate

Cancer Cleared Clinics, a Nevis LLC, announced that it is waiting for approval to operate its Breast Cancer Clinics in thirty countries.

Cancer Cleared Clinics has a unique and tested combination of therapies that are more effective and less harmful to the body than the current methods of cancer treatment used in the United States. This treatment is not available in the United States.

Eugene Steele, cancer historian, said, "I have a personal war against cancer and those that prevent better treatments. The Standard American Diet is the major cause for the two largest killers: heart disease and cancer. Every person has cancer created in their bodies everyday. Our bodies are equipped with an immune system which attacks and destroys these cancer cells. When we eat a Standard American Diet we weaken the immune system and it cannot destroy the cancer cells. This can all be reversed and has been available for over 100 years."

The Cancer Cleared Clinics' method is to remove the protection the breast cancer cells have, and let the body destroy these cancer cells in seven days. Cancer Cleared Clinics offers a money back guarantee and a fixed fee of \$3500. No other clinics in the world will make this offer. "There have been many developers of cancer therapies that have been blocked or ignored," stated Mr. Steele. "The United States lags behind many other countries in delivery of ground-breaking advances in quality medical care."

Steele adds, "There are more effective treatments for cancer, but because of the politics and restrictive laws in the United States, doctors can only make quiet suggestions to their patients because these doctors do not want to incur the wrath of the FDA and the medical establishment, and jeopardize their license to practice medicine."

Cancer Cleared Clinics is in the last phase of financing. Each Clinic costs \$200,000 to establish. They have a new concept of cancer medical tourism. Each clinic will be located in a resort making the treatment a vacation. The treatment only require 45 minutes a day for seven consecutive days. The rest of the day the client is free to enjoy their vacation with their family. There is no chemotherapy, surgery or radiation.
